INTRODUCTION

- Capital Bike Share
- Project Objectives

Capital Bike Share

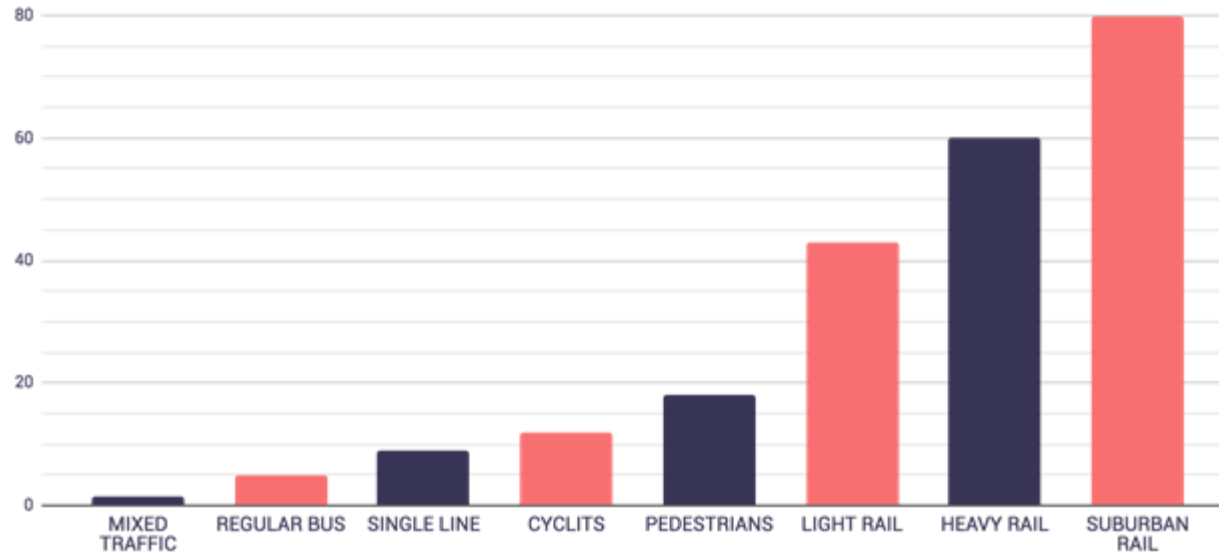

Capital Bikeshare is metro DC's bikeshare system, with more than 4,300 bikes available at 500 stations across six jurisdictions around Washington, DC in USA. Capital Bikeshare provides residents and visitors with a convenient, fun and affordable transportation option for getting from Point A to Point B.

- We are using the recorded data of the bike trips which were used in Capital Bike share website.
- The objective of this project is to determine the peak hours, days, months in which bikes are mostly occupied by the subscribers / customers during Covid Situation.
- We have chosen this project as it provides insights into the factors which affects the bike sharing on the basis of weather conditions, days or locations. We can use this analysis to predict future consumption of these bikes.

PASSENGER CAPACITY

Different Transport Modes

Washington DC,USA – Passenger information – 2019 (Millions)

CORONAVIRUS GROWTH

In Public Transport effect during 2020

Dataset

The dataset publically shared on the Capital bike share website

We have used 2020 year data from Capital bike share website

We have used the weather data of washington D.C from the website www.freemeteo.de

Dataset Features Considered

- Date – date of the trip
- Time – Time of the trip
- Station Number
- Station Name – Location Name
- Member Type – user
type(Registered/Casual)
- Count – Number of Ride Count
- Temperature
- Capacity – Station Dock Capacity

02

Data Analysis

Exploratory Data Analysis
Analysis Findings

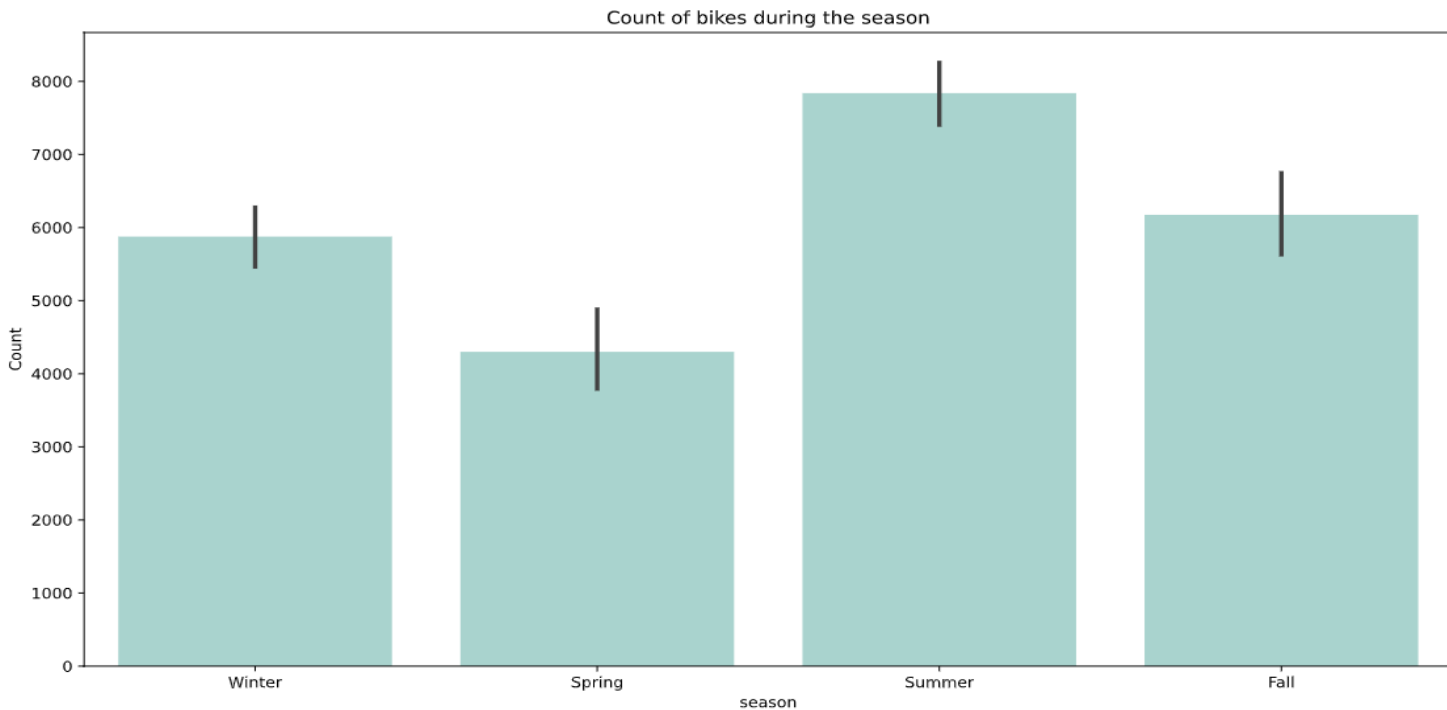

Covid impact on users

NUMBER OF RIDES

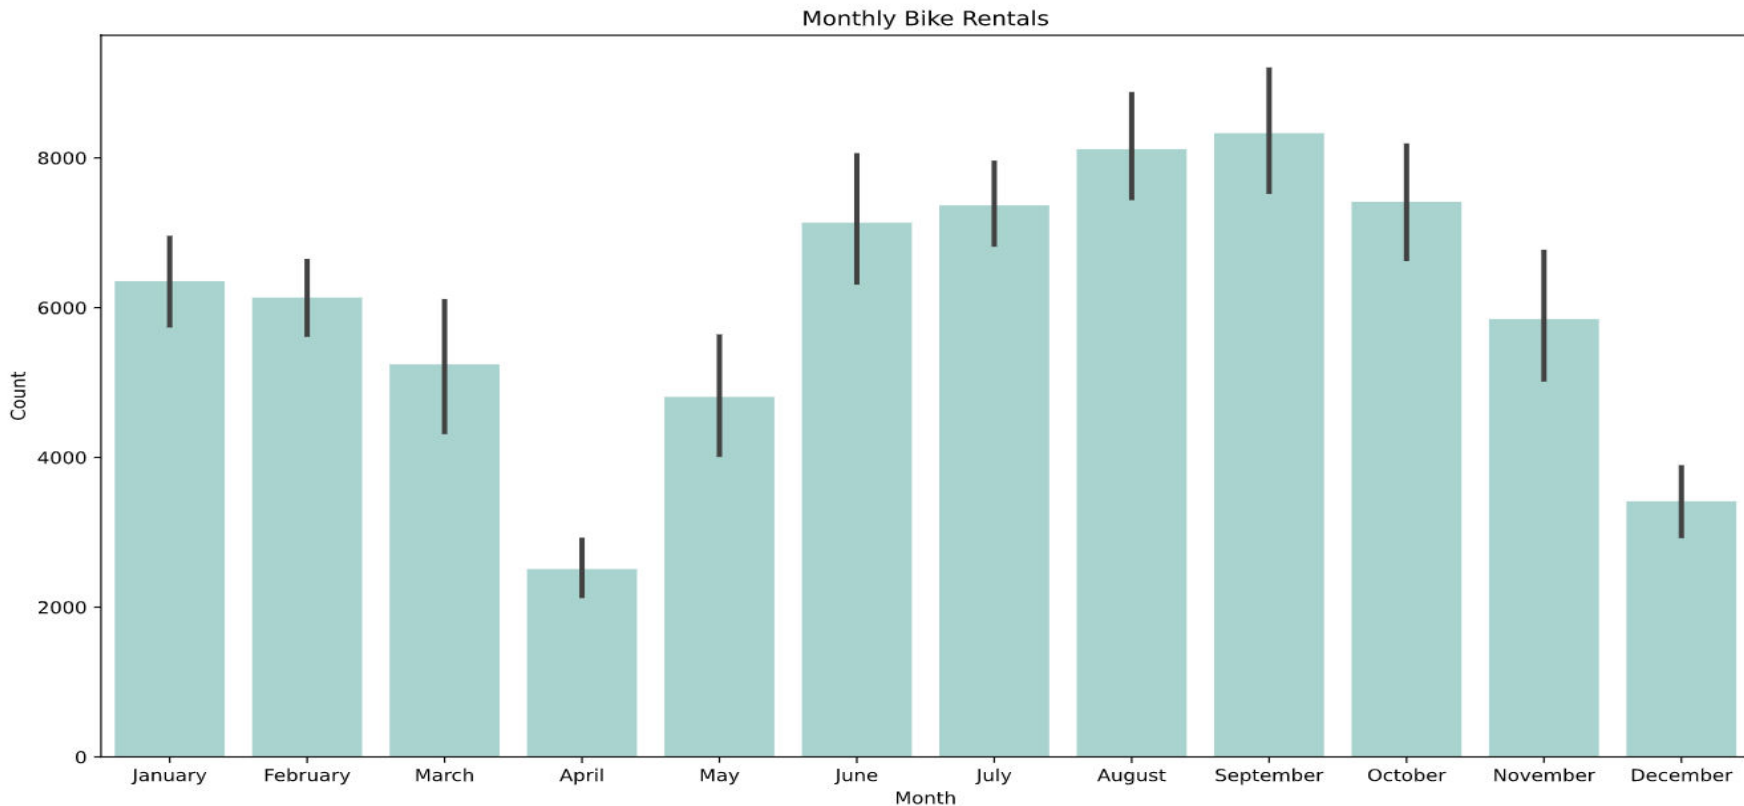

Bike Share Rentals

Season wise Bike share rentals during covid - 2020

Monthly Bike share rentals

During Covid - 2020

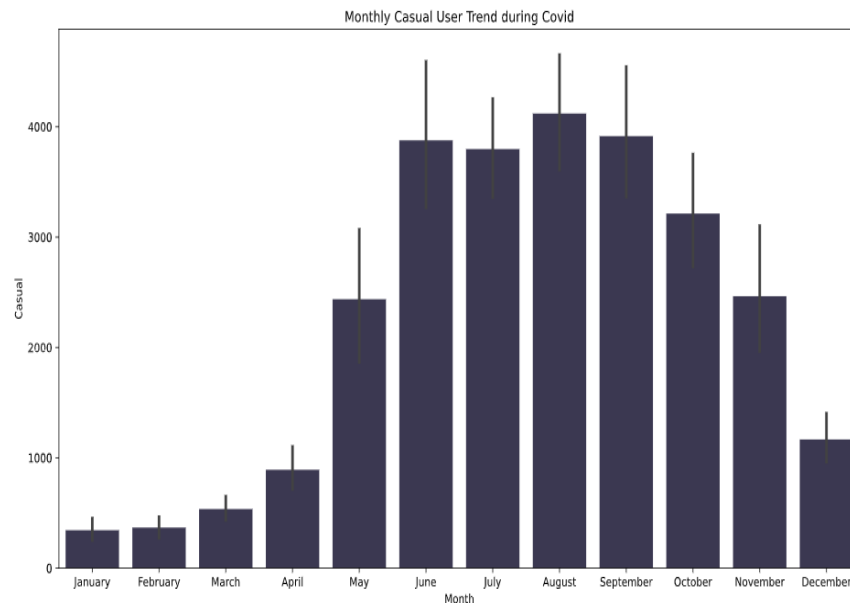

Bike Share User Usage during Covid

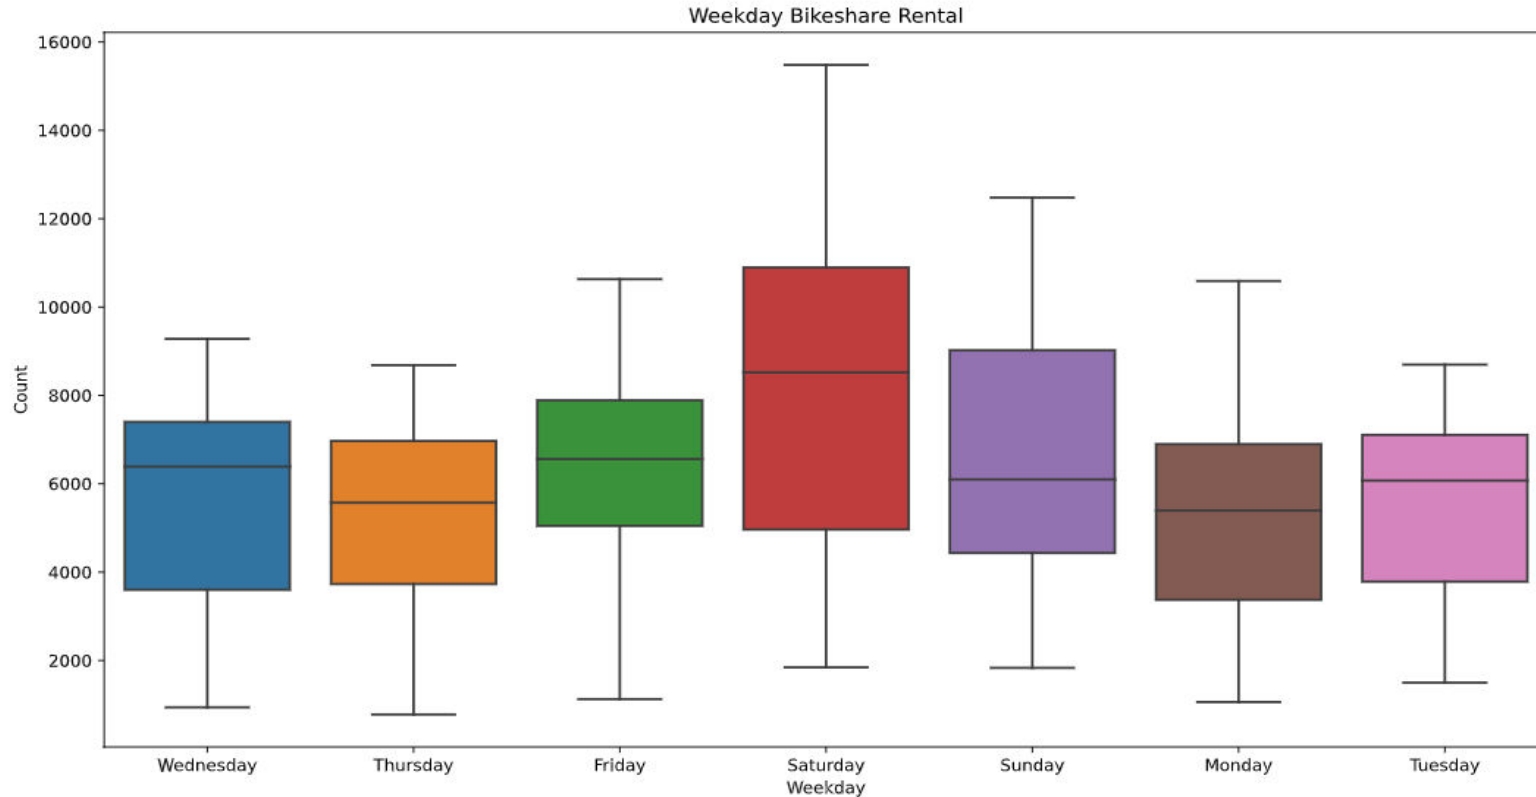

Registered Member

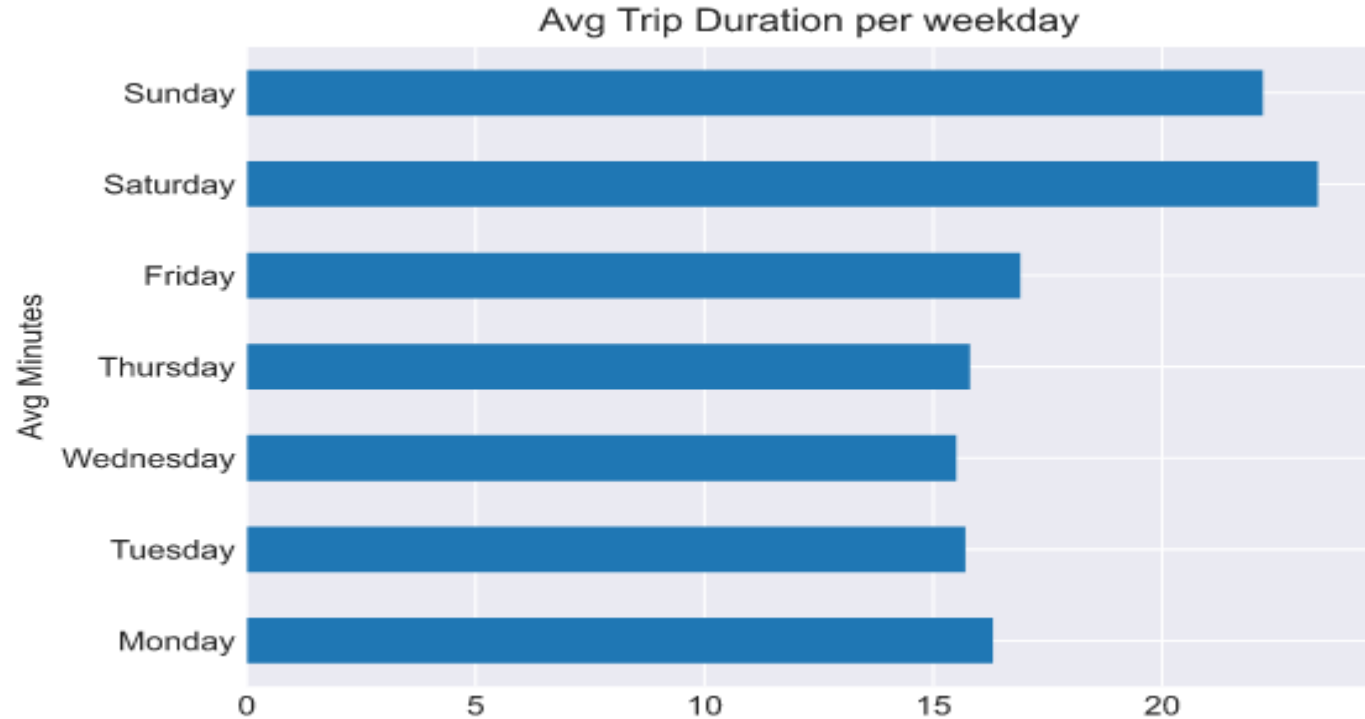

Casual Member

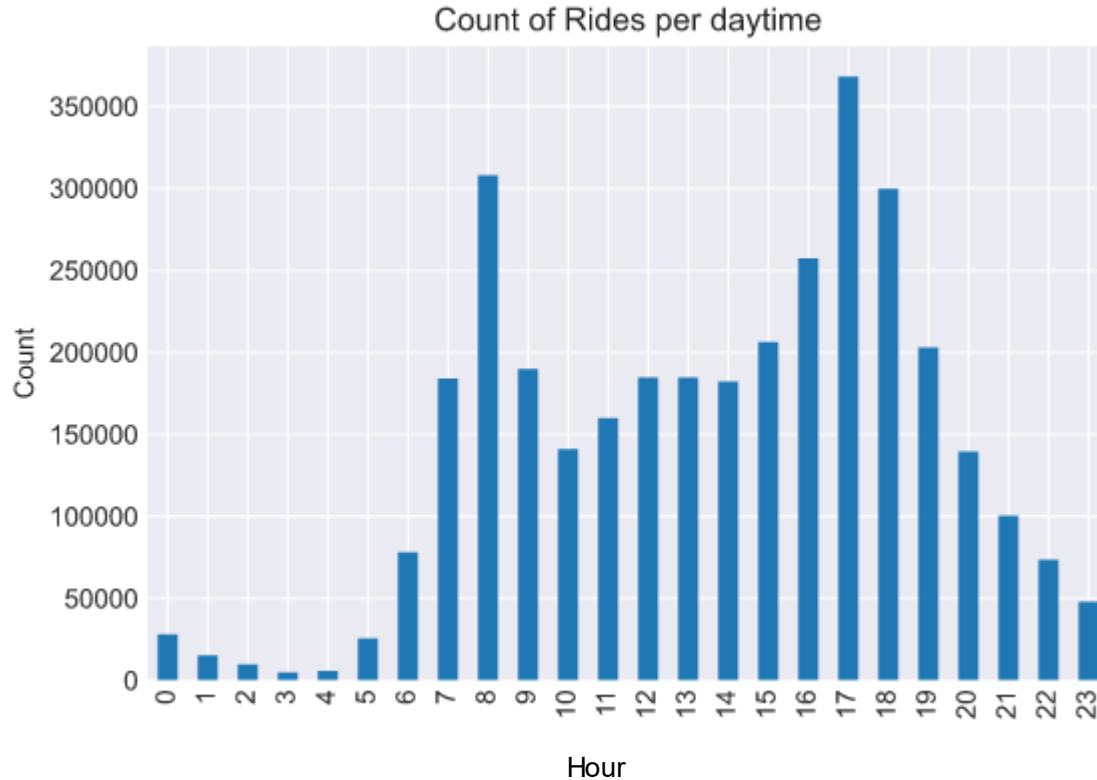

Weekday Bike Share Rentals During Covid-2020

Average Trip Duration on Weekdays

Peak hours

- The Busiest time which is 8:00AM in the morning and 5:00PM in the evening
- Least bike rental is done at 12:00 AM to 5:00PM

Trip Duration of Rides

- Average duration of bike trip is around 10 minutes

Top Busiest Stations

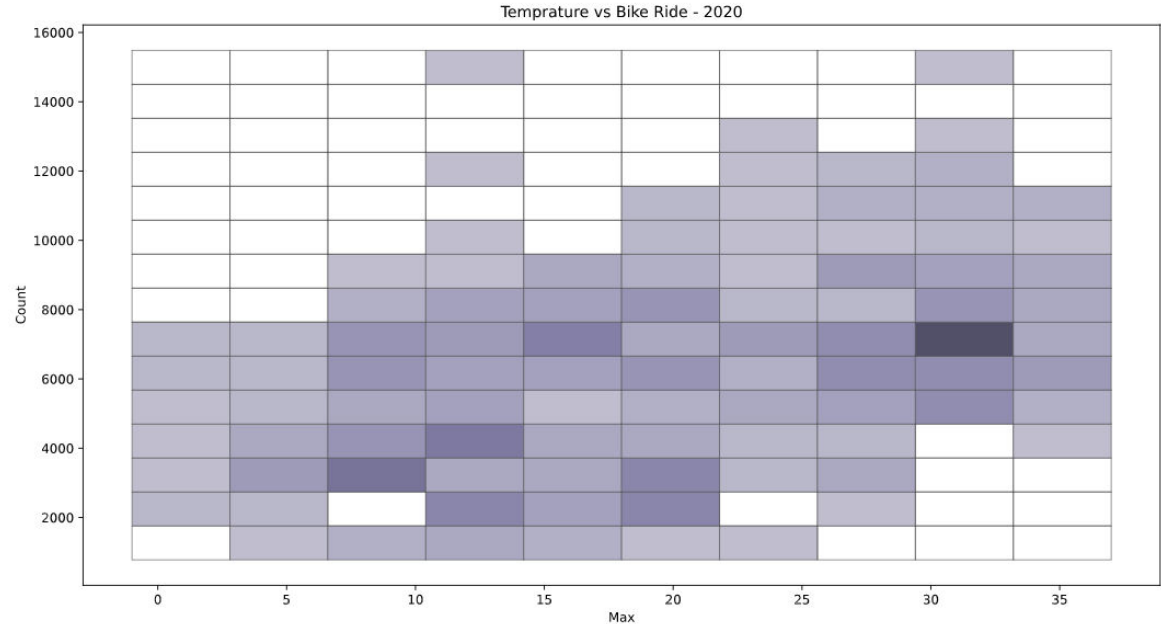

Relationship Users and Temperature and Humidity

Temprature vs Bike Share Counts

- Temprature plays a important role on riding the bike .
- Most Trips are recorded when temprature is between 20 – 30C

03

Machine Learning Model

Machine Learning Model Implementation

Train Dataset

We have Taken trained dataset of 2020 based on the features Temprature, Humidity and ride count data

Machine Learning Model Accuracy

Machine Learning Model implementation

- Based on the trained data – the app will be developed in order to predict the bike prediction
- We use flask app to create the app

04

Conclusion

Findings

Future work of Data Analysis

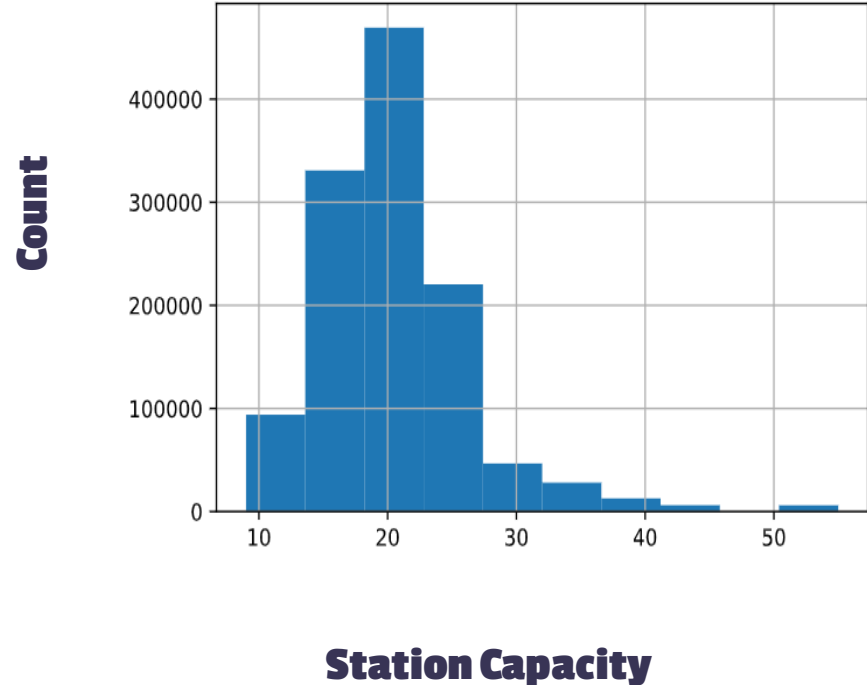

Conclusion

- We have found insights peak hours, days, months in which bikes are mostly occupied by the subscribers / customers during Covid Situation.
- We have found insights into the factors which affects the bike sharing on the basis of weather conditions, days or locations. We can use this analysis to predict future consumption of these bikes.
- We can use the Station and user importance based on capacity of each station and focus on reducing the operation expenses.
- Focus on discounts with related to casual users and registered users to sustain the business
- Reducing the operation costs by removing the not used station and working on maintenance

Station Capacity

- Temperature plays a important role on riding the bike .
- Most Trips are recorded when temprature is between 20 – 30C

THANKS!
